

For charcoal barbecues, we recommend real lump charcoal, which burns hot and clean and produces a pleasing, authentic flavour.

**Cobb Green Fire**  
sku COBBGF626

Green Fire is made from coconut husks, formed into a block that fits perfectly into the Coob fuel grill, but also suitable for other charcoal barbecues.

The surface of the block is treated with an accelerant, so it lights with one match and is ready to go in about 2 minutes - at which point it burns very hot, with very low emissions for about 2.5 hours.

**EziLite Charcoal (10kg)**  
sku EZICHAR

Lump charcoal burns hotter, longer and cleaner than briquettes. It can also be extinguished and re-used (unlike briquettes which tend to disintegrate).

Derived from plantation-grown vitex timber from Indonesia.

Showroom pick up only.
